

PRODUCT DATA SHEET

STARTERCLIP

PRODUCT DESCRIPTION

If decking boards are fastened indirectly/not visibly, then the edging on the surrounding structures (e.g. houses or walls) poses a particular challenge.

The Eurotec StarterClip has been **specially developed for these edgings**.

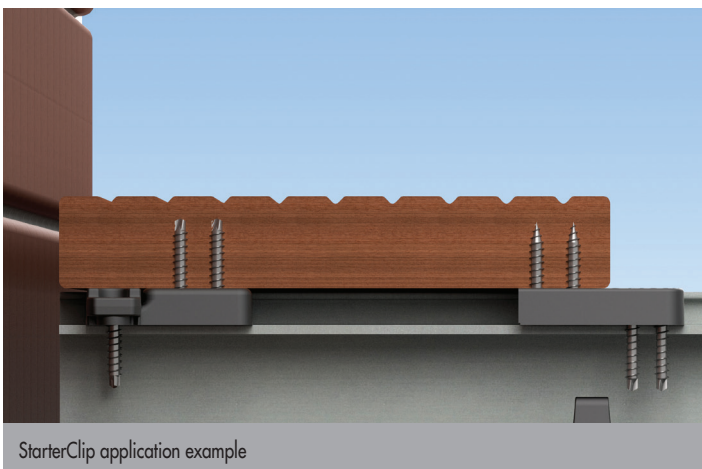

ADVANTAGES AND SPECIFICATIONS

- Indirect/concealed fastening solution for edging
- Supports design-based wood preservation thanks to approx. 10 mm board distance from substructure
- Weather-resistant

MATERIAL

- Polyamide 66 with 30% glass fibre reinforcement (PA 66-GF 30) in black

PRODUCT TABLE

Art. no.	Material	PU*
975591	Hard plastic	10

*40 system screws are included in the scope of delivery

TORQUE

USE LOW TORQUE

Excessive torque can cause damage to or malfunction of the connection. So make sure that you adjust the torque setting and switch off the impact function on your screwdriver.

INSTRUCTIONS FOR USE

The StarterClip may only be used for dimensionally stable decking.

Dimensionally stable decking includes the following timber types, treatment methods and composite materials:

- Larch
- Douglas fir
- Wood-polymer composites (WPC)
- Thermowoods made of softwoods and hardwoods
- Acetylate wood

It is not recommended to use the StarterClip for timber with high bulk density and/or high swelling and shrinkage and only moderate resilience (dimensional stability). This particularly applies to the cumaru, ipe, macaranduba and robinia (false acacia) wood types.

When selecting the wood, particular attention should be paid to thorough sorting (such as removing boards with interlocked grain and so-called wavy grain boards) and good conditioning (target moisture content) of the decking boards.

If necessary, the suitability of the wood type must be determined by the manufacturer / wood supplier.

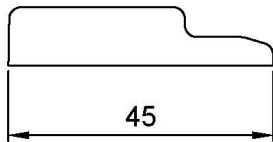

The Eurotec StarterClip is suitable in conjunction with the following products:

- Aluminium system profiles (except for EVO Light & Eveco aluminium system profile)
- HKP support profile
- Deck glider/Mini-deck glider
- T-Stick
- Tenax spacer
