

PRODUCT DATA SHEET

BOLT ANCHOR, ECB-FZ-C3

PRODUCT DESCRIPTION

The Eurotec bolt anchor is a **torque controlled expansion anchor** made of galvanised steel **designed for push-through installation** in cracked and uncracked concrete. What makes this bolt anchor special is that it has both a **high load-bearing capacity** and is simultaneously suitable for installation at very small centre and edge distances. This bolt anchor is available in a number of different sizes **for a range of anchoring depths**, which means that it can be used **in a number** of different ways. Every bolt anchor is fitted with an expansion clip, which assures their high load-bearing capacity and means that it is possible to **use fewer anchorage points**.

ADVANTAGES

- Option 1 in cracked and uncracked concrete
- Resistant to seismic activity
- Approved for fire resistance class R30-R120 in concrete
- Can be used in service classes 1-2
- High extraction values
- Seismic performance tested to categories C1 and C2
- Low expansion range, which means that they can be placed close together and near edges

MATERIAL

- **Anchor rod:** Carbon steel, galvanized $\geq 5 \mu\text{m}$
- **Flat washer:** DIN 125 or DIN 9021 / DIN 440, galvanized $\geq 5 \mu\text{m}$
- **Nut:** DIN 934, galvanized $\geq 5 \mu\text{m}$
- **Expansion sleeve:** Carbon steel strap, sheradised $\geq 15 \mu\text{m}$

Intended use	M8	M10	M12	M16	M20
Seismic stress, category C1	X	X	X	X	X
Seismic stress, category C2		X	X		X
Resistance to fire	X	X	X	X	X

ASSEMBLY INSTRUCTIONS

- 1** Drill hole
- 2** Thoroughly clean drill hole
- 3** Drive in bolt anchor with a hammer
- 4** Screw on and tighten the hex nut to the relevant torque
- 5** Finished!

MATERIALS:

- Reinforced and unreinforced standard concrete without fibres in accordance with EN 206:2013+A1:2016
- Strength class C20/25 to C50/60 in accordance with EN 206:2013+A1:2016
- Cracked and uncracked concrete
