

PRODUCT DATA SHEET

SUPPORT CLIP SET

PRODUCT DESCRIPTION

The support clip set consists of **two individual clips as well as two cork pads**. The set is used to **support the terrace covering**, is a **flexible and high-quality** alternative to conventional support measures, **thereby preventing the stone slab from breaking**. When installing particularly large-format stone slabs, these can easily break due to a **lack of support** below the covering. The support clip set can **be used to avoid this**. The support can **be integrated into the actual substructure very quickly and easily**.

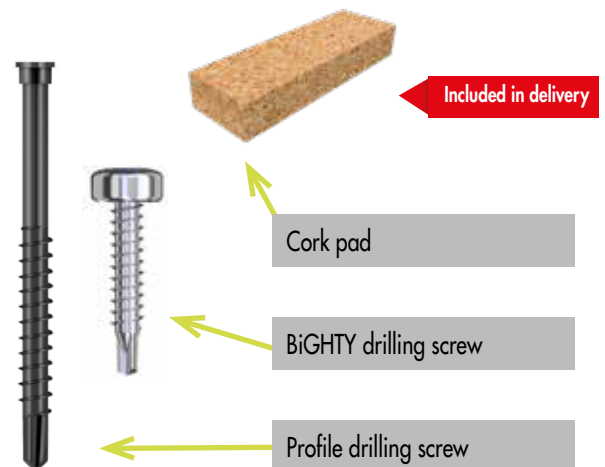

The support clips **can be combined with an individually cut-to-length EVO Light** aluminium system profile and clicked into the desired point of the substructure or **mounted using the supplied fastening screws**. The cork pads are then simply inserted into the top of the EVO Light aluminium system profile. They are used **to dampen foot fall noise**.

SPECIFICATIONS/ADVANTAGES

- Prevents stone slabs from breaking quickly
- Foot fall noise insulation by using cork pads
- Possible to adjust to the standard centre-to-centre spacing of the substructure
- Adjusting feet as well as EVO aluminium system profiles can both be done away with thanks to the support clip
- Possible to mount the clips using a click system or fastening screws

Support Clip

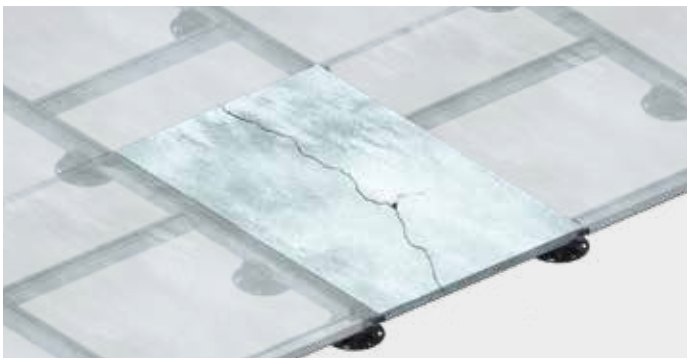

Cork pad

BiGHTY drilling screw

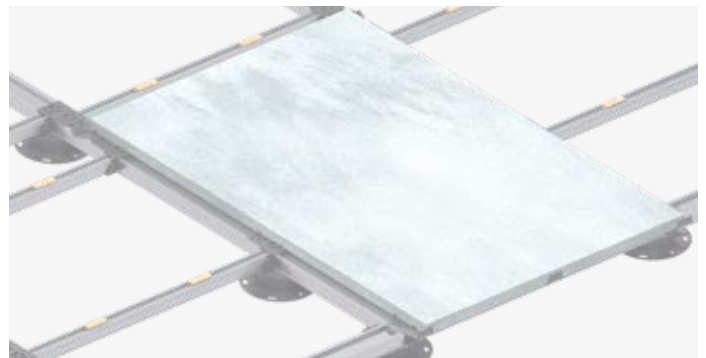

Profile drilling screw

Note: The EVO Light aluminium system profile is not included in the scope of delivery!

IMAGES OF APPLICATIONS

Increased risk of breaking individual slabs due to a lack of support profile

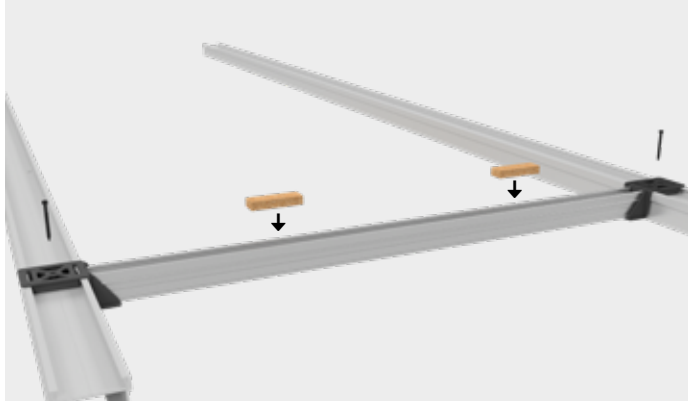

Increased risk of breaking after mounting the support clip set
